

Create a query that lists each movie, the film category it is classified in, and the number of times it has been rented out?

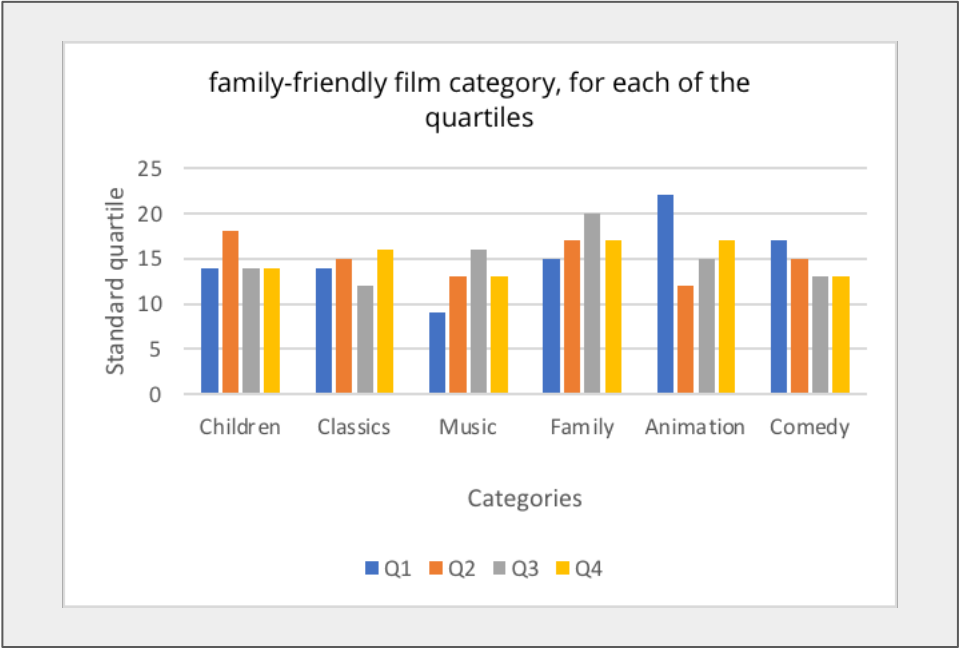

We want to understand more about the movies that families are watching. The following categories are considered family movies: Animation, Children, Classics, Comedy, Family and Music.

Find the information of most 10 paid customer?

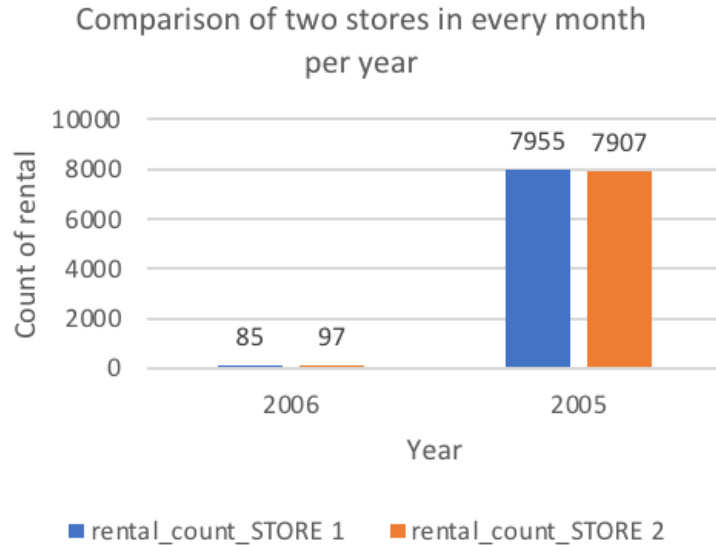

This visualization showing the most 10 paid customers

Provide a table with the family-friendly film category, each of the quartiles, and the corresponding count of movies within each combination of film category for each corresponding rental duration category?

This visualization represents a table with the family film category, each of the quartiles and the corresponding count of movies within each combination of film categories for each corresponding rental duration category.

Write a query that returns the store ID for the store, the year and month and the number of rental orders each store has fulfilled for that month. Your table should include a column for each of the following: year, month, store ID and count of rental orders fulfilled during that month?

This visualization represents a comparison of two stores on their count of rental orders during every month for all the years we have data for.
